

Weather and traffic reports on XM radio are very helpful and are a help to all that travel the highways. You know that they are on all the time and on what channel. This allows planning of a trip around bad weather, also being able to find out very early about a traffic problem in a city allowing you the most option to avoid the scene. I would think that this would be a great deal of help to Law Enforcement the fewer cars and trucks at an accident the better. Whoever put the bill forward uses some other kind of transportation or they travel the same roads all the time. God forbid there would be money involved in stopping something that could help a police officer in his efforts to serve the public! I have called my Congressmen I can only say this would be unsettling if passed considering what the news is allowed to report about congress I can find no reason the weather and traffic should be a problem!
